PROTECTION AGAINST SPAM

Mail Warden Pro is a complete security software solution designed to provide maximum protection against spam and viruses for small, medium and large businesses. Mail Warden, Pro helps businesses stop annoying and unwanted email messages while protecting your data. It is easy to install, easy on your budget and easy to manage.

Even though you may already have an anti-virus solution in place on your desk top, Mail Warden Pro will give you an extra layer of protection, on your SMTP email gateway, a dual-prong strategy to combat viruses.

Mail Warden Pro is the email administrators dream product with little configuration and allows businesses using any SMTP supported systems including MS Exchange® and Lotus Domino®, to efficiently protect your email system against email borne threats.

ANTI-VIRUS PROTECTION

Mail Warden Pro includes essential filtering features in addition to our Award Winning Anti-Virus protection. Aggressively priced, Mail Warden Pro provides your business with reliable data protection on your email gateway to complement your desktop anti-virus for a dual counter measure against computer viruses.

THE ZERO CONFIGURATION ANTI-SPAM SOLUTION

- Proven stability
- Install in minutes
- Low maintenance
- Minimum configuration
- Automatic spam identification upon installation through our Intelligent Anti-Spam Features
- Automated updates to over 250,000 daily spam attacks
- Tailored rules based on individual or group email policies
- Award winning virus protection with automated updates

SYSTEM REQUIREMENTS

- Windows NT® v.4 SP6 Server or Workstation; Windows 2000® Pro or Server.

MAIL WARDEN PRO

ANTI-SPAM

Real Time Automatic Filtering - Mail Warden Pro's Intelligent Anti-Spam Feature allows businesses that are looking for an affordable anti-spam solution with limited IT resources to effectively protect their email system after product installation. Mail Warden Pro's Intelligent Anti-Spam feature positively identifies over 250,000 spam attacks per day, regardless of content (audio, video, images etc.). Once a message is sent to a businesses email server, Mail Warden Pro will cross-reference the information with the Intelligent Anti-Spam feature's database of known spam.

RBL Filter - To prevent unsolicited email from know spammers, Mail Warden Pro will enable you to check the IP address of each sender against a real-time black hole list, which is pulled from an RBL Service Database. This can be changed to the RBL Service Database of your choice.

Rules Wizard For Complete Filtering Modifications - Mail Warden Pro 'Rules Wizard' provides an added level of security by identifying, then quarantining or rejecting messages that violate your email usage policy. Adding another level of protection, Mail Warden Pro's rules can be modified to meet your specific security and usage requirements. The easy to use Rules Wizard will walk you step by step, to setup each needed rule. Mail Warden Pro gives you total control over how each message is transported and distributed within your email infrastructure.

Relay Filter - Prevent relay filtering hackers from using your email server as a relay for spam, Mail Warden Pro allows you to secure your system to allow only those with specified access to send mail. If a hacker sends spam through your system your ISP could blame you for the problem.

White List - Businesses can create a list of acceptable IP Addresses, Domains, and Senders to prevent information from being blocked by the anti-spam features.

Black List - In addition to the RBL filter, administrators can create your own custom Black List to reject, forward, or quarantine messages by IP Addresses, Domains, or Senders.

As the Technical Director of a growing IT and Services company, I am aware of how much time my staff spends working on email related issues. I am also aware of the time we are losing having to deal with email spam. When I was approached to try the Mail Warden Pro Anti Spam product, I was of course interested but also sceptical since I already have experience with other Anti-Spam products.

Without informing my staff I installed Mail Warden Pro. Within two days of installing the product my email Administrator reported we were no longer being spammed. We were receiving an average of 1,000 spam email's per day. These are now being successfully blocked. We have pretty much enjoyed 100% spam protection and zero false positives and my staff is now concentrating their email efforts on strategic customer related projects. All of this was achieved straight 'out of the box', and without any major configuration issues.

Paul O Neill, Technical Director, Evros Ltd
